How to use your Window solar charger

Welcome!

We would like to thank you personally and warmly congratulate you for buying your Window solar charger. We sincerely hope that your new product will satisfy you and deliver you the best service ever.

Your opinion matters

We value very much your opinion, whether you are satisfied or not, and we would be happy if you would write us an email to help us improving our products. We want to read from you.

customer@lutin-technologies.com

Now, let's start with using your brand new Window solar charger...

What's inside?

Unpack your Window solar charger from its pack. Inside, you should find :

- A Window solar charger

- A USB cable (USB to micro-USB).
 - This cable can be plugged to any device accepting micro-USB connection : MP3 reader, phone/smartphone, tablet, etc.
 - We are sorry for this, but Apple fans (iPhone or iPad) will have to use their own USB cable, with the proper connector type.
- A flyer, quite a special one.
 - This flyer gives you privileged promotional codes for your next orders of our products on Amazon. These promotional codes are not public but are reserved to our valued customers. This is our way to thank you for being our customer.

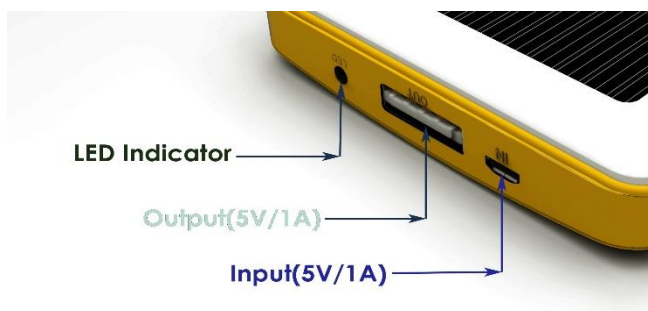

Quick start

First use

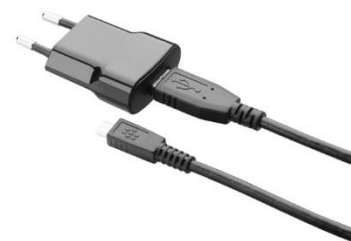

After unpacking your Window solar charger from its pack, charge the high capacity built-in battery.

Just plug it to a USB power source, such as a computer or a wall charger.

Micro-USB end to the **IN** input

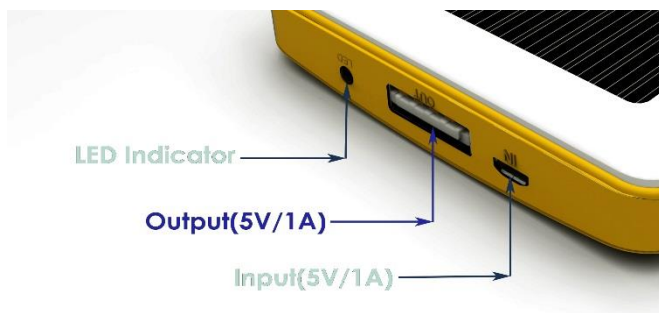

USB end to computer or wall charger

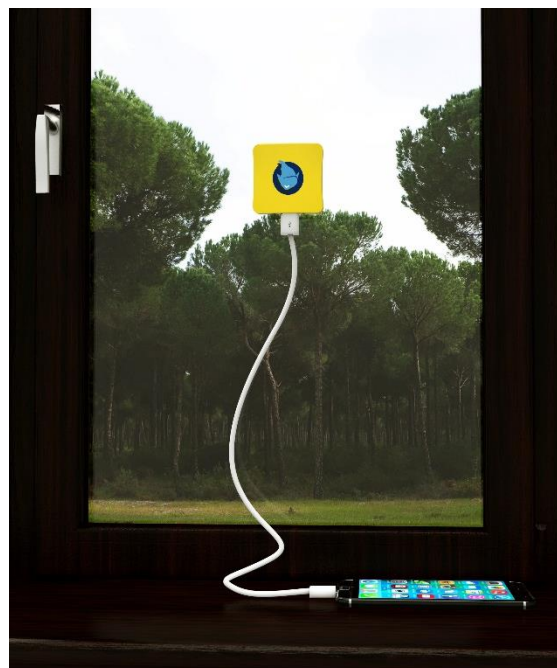

LED light turns on when charging and turns off after charge is complete.

Use of your Window solar charger

Plug USB cable to output

Peel off the protection film and affix your
Window solar charger on the window

Tips of use

1. **Always keep the protective film**, do not throw it at garbage: it protects silicon gel from dust, and eases carrying your solar charger (elsewhere, the silicon gel would stick to your stuff!)

After unfixing your solar charger from the window, before putting it in your bag or pocket, put the protective film back onto the silicon gel.

2. The silicon gel is very strong and affixes very firmly the solar charger to the window. Therefore, to ensure being able to unfix it after charging, you can put a string (or insert partly the protective film) between the window and the solar charger, overtaking both sides. After charging, pull on the string and your solar charger will unfix more easily.

3. **Adhesive part can be reinforced** by applying little moisture to the surface.

4. Your solar charger is dustproof and waterproof (1). Whatever, to ensure a proper and long life to your solar charger, please **clean it softly** with a slightly moisturized tissue, and do not take it to the beach without protection.

(1) IP44 tested: protected against projections of dust and water from all directions

5. Avoid scratches on the solar panel. Especially, **sand is a mortal enemy**, as it is for most electronic devices. Our advice: at the beach, enclose your solar charger and the device to be charged (phone, tablet, ...) into a watertight plastic bag, like freezer bag.

And now, enjoy!
